PROFILE

Final-year HBO-ICT student (Game Development track) at Amsterdam University of Applied Sciences, looking for a graduation internship from February 2027. I build interactive products where the stateful part is engineered rather than improvised: logic separated from rendering, tested without a browser, and shipped in three languages. My current project is a desktop-style serious game about bank-impersonation fraud, written in TypeScript and Lit.

RELEVANT EXPERIENCE

Trust Protocol — independent project 2026

- Designed and built a browser-based serious game about bank-impersonation fraud: the player works through incoming mail, a bank website and a phone call before deciding whether to trust the caller.
- Built a multi-window desktop shell — open, close, focus, move, resize, minimise, restore, per-window minimum sizes and z-index management — as 22 source files, 2,100+ lines of TypeScript, with one runtime dependency and no UI framework.
- Kept stateful logic out of the components: the window manager is a plain class over an immutable state array, and the mail-session and call state machines are DOM-free, which is why 15 unit tests run without a browser or a fake DOM.
- Shipped three locales (English, Simplified Chinese, Dutch) at 63 keys each with no missing or orphaned keys, plus keyboard focus management, ARIA labelling and a reduced-motion fallback. Production bundle: 76 kB (23 kB gzipped).

Web Developer Intern — WebspaceZ, Amsterdam · second internship Sep 2025 – Feb 2026

- Asked back to WebspaceZ for a second internship. I treat that as the most useful reference I have, because it is a judgement made by people who had already seen my work.
- Built an in-browser image-composition tool for producing promotional material, in HTML, CSS and JavaScript.

Web Developer Intern — WebspaceZ, Amsterdam Oct 2022 – Mar 2023

- Designed and built production websites for real clients in HTML, CSS and JavaScript, including the Dutch association of acupuncture physicians (Nederlandse Artsen Acupunctuur Vereniging).
- Owned both the design and the front-end build of each page, working from the client's brief rather than from a fixed template.

EDUCATION

HBO-ICT, Game Development track — Amsterdam University of Applied Sciences Sep 2023 – expected 2027

MBO niveau 4, ICT Software Developer — ROC, Almere · completed in one year Sep 2022 – Jul 2023

Dutch language programme & HBO preparatory year — Taalcentrum Almere / Amsterdam University of Applied Sciences Sep 2018 – Aug 2022

SKILLS

Languages	TypeScript, C#, JavaScript, HTML/CSS
Frameworks & tools	Lit (Web Components), Unity, Vite, Vitest, Git
Practices	State machines and immutable state, unit testing, internationalisation, accessibility

LANGUAGES

Dutch — B1–B2 (working proficiency) · English — B2–C1 · Mandarin Chinese — native

AVAILABILITY

Full-time graduation internship, February – July 2027. EU permanent residence — no work permit or visa sponsorship required.
